

ACE-L Card

Austria Card's ACE Product Line

Many retailers focus on an increased and strengthened customer relationship. One of the easiest ways to get in contact with the consumers is to combine payment functionality with a loyalty program. Collecting and storing bonus points on chip is well known, convenient and practiced everywhere.

Austria Card offers a wide range of multiple customised loyalty solutions.

A nationwide loyalty system open to multiple retailers was implemented in Austria. Other large scale installations comprise card schemes for gas stations, implemented e.g. in Turkey. Closed multi-application systems are used e.g. as campus cards in Austria and Slovakia or event vouchers at Rock festivals. OTP (one time password) applications are deployed for secure internet access.

The ACE-L range is available as a standalone product and in combination with Austria Card's EMV solutions ACE-V for Visa International and ACE-M for MasterCard® Worldwide.

Supported Functions & Features

- Files and data structures
- Authentication mechanisms
- Secure Messaging
- Cryptographic key management
- Comprehensive access control mechanism enabling an implementation of flexible access control policies for customer applications.
- Generic PKI application (depending on the product)
